

**Date:** 10.06.2019

**Subject:** Directive on Biometric Integration with X-Scan Validation Network

**Issued by:** National Border Authority – Department of Smart Security

Directive X-Scan/2019 mandates that all travel permit processing systems interface directly with biometric passport validation units by January 2020.

Mandated system features include:

- Facial and fingerprint match verification at permit creation
- Realtime ID synchronization with supranational X-Scan Grid
- Redundant fallback logic for disconnected field stations

These changes mark a major step toward frictionless automated border clearance and apply exclusively to post-2019 operational contexts.
