Date: 08.10.2002

Subject: Directive on the Alpha Rollout of the Digital Penalty Point System (DPPS)

In accordance with the Digital Governance Strategy (DGS 2001–2005), this directive formally initiates the alpha-phase rollout of the **Digital Penalty Point System (DPPS)**. The system represents a major infrastructural modernization for road traffic enforcement, establishing a centralized national database for recording, managing, and sharing violation-related penalty points across authorities.

1. Scope and Purpose

The DPPS aims to replace fragmented regional tracking practices with a unified system that ensures transparency, traceability, and improved compliance with road safety regulations. By digitizing the management of penalty points, law enforcement authorities and transport offices will be able to:

- Prevent circumvention of fines through regional gaps
- Detect repeat offenders across jurisdictional boundaries
- Ensure standardized escalation procedures for severe violations

2. Alpha Region Selection

The system will be deployed in alpha-phase to the following administrative zones: Stuttgart Urban Area, Leipzig District, and Rhein-Neckar Region. These zones have demonstrated both technical readiness and sufficient case volumes to support early-phase monitoring and iteration.

Participating units will be granted secure access to the DPPS interface, provided through the Federal Traffic Data Exchange Gateway (FTDEG). Training for designated staff will begin October 14th.

3. Transition and Hybrid Handling

During Q4 2002 and throughout 2003, participating regions will operate in a **hybrid mode**:

- New offenses will be logged both locally and in DPPS
- Historical violations remain under legacy management
- Appeals and escalations must be mirrored in both systems

This gradual dual-processing approach ensures legal consistency and prepares administrative staff for full-scale adoption.

4. Timeline

- Alpha-phase: October 2002 – March 2003
- Beta-phase rollout expected in 8–10 additional regions by Q3 2003
- Nationwide standardization tentatively scheduled for Q2 2005

5. Legal and Technical Compliance

The system complies with the current provisions of the National Data Integrity Act (NDIA §11) and has received preliminary legal assessment clearance from the Ministry of Justice.

A review board will evaluate system impact after 90 days. All participating units must submit feedback and system usage logs by January 20th, 2003.
