National Border Authority
Internal Reference: TP/Transmission Protocol V4
Date: 25.07.2017

Subject: Current Protocol for Digital Travel Permit Transmission

Until further notice, all travel permit data submissions must adhere to Protocol V4 (2016):

- Permit records are transmitted once daily to the Border Control Archive Server (BCAS).

- Data structure follows "Flat Format 3" without field-level validation.

- Personal identifiers (e.g. passport numbers) are hashed at the local agency level.

Regional offices are reminded that audit logs are retained for 14 days and can be overridden locally after export confirmation.

The current schema remains valid throughout Q3 2017. Changes may be proposed following the Mobility Governance Council's fall session.
